ATTN :

Operational

Transmittal of RS-6

1. Prior to supplying RS-6 sets for [] operations, it appears that [] should have the opportunity to examine the set and comment as to its acceptability for the operations. We are therefore forwarding under separate cover one (1) RS-6, #2022, which should be turned over to [] for their study. If they agree that it meets the requirements, we are prepared to furnish the number of sets requested in the reference. The transfer report for this set will be sent at a later date.

25X1
25X1

2. The RS-6 being sent has not been modified to eliminate key clicks. Kits for this purpose are en route to [] and all sets will be modified when the kits are received.

25X1

25X1

3. In line with the current reduction of [] operations as outlined in [] care should be taken to assure that the impression is not given to [] that the supply of these sets indicates an unlimited source for their future operations.

25X1

4. The request for Silver cells comes as somewhat of a surprise since [] evidenced little interest in them in previous discussions. We are unable to provide them at present, as we do not stock them. Actually [] is in a position to obtain Silver cells made in France although we might buy them here if it is decided to use them for the operation. However, in view of the re-charging problem, it appears that in spite of the weight involved, the GN-58 hand generator would be the best solution for a power source. We would appreciate receiving an outline of the envisaged mode of operation so that we may better evaluate the requirements.

25X1

5. We assume that the project budget will cover the cost of the additional equipment.
